

## Crown or Bridge Post-Op Instructions

- After your first appointment for crown or bridge treatment, a temporary crown is usually placed on the teeth involved. The temporary crown protects while the custom crown is being produced. The cement used is also temporary so that the crown can be easily removed at your next appointment.
- If your temporary crown comes off before your next appointment, place the temporary back on your tooth and call us at 581-8600.
- You may experience some discomfort due to irritation of the area during the treatment procedures or sensitivity to cold or pressure.
- Your new permanent crown will be shaped and shaded especially to match the fit and color of your teeth. If you feel the bite is not correctly balanced, please call for an appointment and we will be happy to adjust it.
- Care for your crown with proper brushing and flossing. It is especially important to keep the edge of the crown clean at the gum line.

*Please follow these home care instructions carefully and call Dr. Rosenfeld if you have any questions or concerns.*
